Keval selects SkySparc for Wallstreet Suite managed support service

Stockholm, November 15 2011 – Finnish municipal pensions group Keval has signed for the SkySUPPORT service to maintain its Wallstreet Suite installation and give it a complete package of assured availability and surveillance.

Keval is currently upgrading from Wallstreet Suite v6.5 to v7.4 to take advantage of the new instrument framework and advanced asset management functionality. SkySparc now provides Keval with a trusted and proactive managed service to support their asset management operations, freeing up internal resources to work on the upgrade project and other business priorities.

“SkySparc has an excellent service reputation in the market,” says Juha Soininen, Head of Middle Office at Keval. “We are a user of its SkyREPORT solution, so it was a natural extension to take advantage of SkySUPPORT too. We know we can rely on the dedicated team of technical and financial experts at our disposal to ensure the high availability of our critical systems.”

Thomas Bergqvist, partner, SkySparc, says, “We are pleased to strengthen our relationship with Keval through our support service. They join a growing number of customers who rely on SkySUPPORT to achieve high quality support to their business operations.
